

Turning in Assignments Checklist

- Never submit a .zip to the server
- Make sure none of your file names have spaces, quotation marks, or any other special characters (i.e. nothing like 'main (1).cpp')
- Remove any “weird” files from your folder before uploading. This includes:
 - main.o
 - replit.nix
 - If you are unsure if a file should be removed, contact a TA for assistance
- The files you MUST submit include*:
 - main.cpp
 - ArgumentManager.h
 - any other .h/.cpp files that are part of your solution
- Each assignment must be its own folder in your root directory
- All folder names must be lowercase
- Run the command `chmod -R 755 folder_name` for each assignment you upload to ensure your folder has the correct permissions

*Uploading the ans.txt, input.txt, output.txt, and/or test.sh file(s) will not cause any compilation issues but it is not required for you to upload them to the server
